3 Aim

Immunisation is a simple, safe and effective way of protecting individuals against harmful diseases before they come into contact with them in the community. Immunisation not only protects individuals, but also others in the community, by reducing the spread of disease.

5 Who is affected by this policy?

- Child
- Parents
- Family
- Educators
- Management
- Visitors
- Volunteers

6 Implementation

- The service will use the attached Recommended Minimum Periods of Exclusion to exclude children and educators and inform parents of exclusion and non-exclusion periods for infectious diseases. We will minimise the spread of potential infectious diseases between children, other children and educators by excluding children who may have an infectious disease or are too ill to attend the service and facilitating the prevention and effective management of acute illness in children.
- Notification of the child’s parents or nominated contacts will occur immediately.
- Our service will comply with the relevant legislation which requires child care services to notify the local Public Health Unit of specific notifiable diseases (see heading Notification and Exclusion periods).
- Children might be brought to care with symptoms or signs of illness or while in care suddenly develop an illness that has not been diagnosed by a doctor, and that might be potentially infectious or potentially life-threatening for the child. Symptoms may not clearly fit those listed in exclusion diseases making it difficult for the service to decide whether to accept or exclude the child from the service. If we suspect a child may have an infectious disease, we will exclude the child until we receive a medical certificate stating the child is not contagious and is okay to attend the Service.
- Many illnesses, while not fitting exclusion criteria, can transmit disease to other children in care, and can make a child too ill to participate in normal activities. All children who are unwell should not attend the Service and we will ask parents of children who are unwell to collect the child from our Service or to make alternative arrangements for their child’s care.

If an infectious disease arises at the service, we will respond to any symptoms in the following manner -

- Isolate the child from other children.
- Ensure the child is comfortable and appropriately supervised by educators.
- Contact the child’s parents or nominated emergency contact. If the child’s parents are unavailable we will contact the next nominated individual. We will inform the contact of the child’s condition and ask for a parent or other authorised individual to pick the child up as quickly as possible. Any individual picking the child up from the service must be approved by the child’s parents and be able to show identification.
- Ensure all bedding, towels and clothing which has been used by the child is disinfected. These items will be washed separately and if possible air dried in the sun.
- Ensure all toys used by the child are disinfected.
- Ensure all eating utensils used by the child are separated and sterilised.
Provide information in the child’s home languages to the best of our ability.
Inform all service families and educators of the presence of an infectious disease.
Ensure confidentiality of any personal health related information obtained by the service and educators in relation to any child or their family.
The Nominated Supervisor or another Responsible Person may require a child or staff member to provide a doctor’s certificate on the first day back from an infectious illness stating they are okay to return to the Service.

**Fevers**
Unwell children include those with fevers. Fevers refer to temperatures above 38°C, and are usually a sign of infection (eg virus). When children develop a fever at the service, educators and staff will:
- contact parents and ask them to collect the child unless we have written advice from a medical practitioner that the fever is not caused by an infectious disease (e.g. teething).
- Administer first aid if required in line with service procedures. This may include calling an ambulance.
- if the child is distressed, bathe their face in lukewarm water and administer paracetamol if parents have given written permission or approved over the telephone.
- offer water to the child and ensure they are not overdressed and their clothing is comfortable
- monitor the child’s behaviour, alertness and any other symptoms that could indicate serious infection including rash, stiffness, vomiting, coughing or convulsions.

**Notifications and Exclusion periods**
As outlined in the Public Health and Wellbeing Regulations 2009 (Vic):
- parents must advise educators as soon as possible if a child has an infectious diseases or the child has been in contact with a person infected with an infectious disease Reg 84(1). These diseases and the minimum periods of exclusion are listed in Schedule 7 and can be accessed on-line at [www.legislation.vic.gov.au](http://www.legislation.vic.gov.au)
- Approved providers or nominated supervisors must inform the parents and the Secretary of the Department of Health within 24 hours of forming the belief that a child is suffering from pertussis, poliomyelitis, measles, mumps, rubella or meningococcal C Reg 84(2).
- Approved providers or nominated supervisors must not allow a child who has been infected or had contact with the diseases outlined in Schedule 7 to the Regulations to attend the service for the exclusion periods outlined in Schedule 7 Reg. 85.

The diseases and exclusion periods outlined in the Schedule to the Public Health and Wellbeing Regulations 2009 are similar to the National Guidelines detailed below under “Recommended Periods of Exclusion”.

**Infectious Diseases requiring Notification to the local Public Health Unit**
Apart from pertussis, poliomyelitis, measles, mumps, rubella or meningococcal C, infectious diseases only require notification from doctors and laboratories. A list of diseases can be found at [http://ideas.health.vic.gov.au/notifying.asp](http://ideas.health.vic.gov.au/notifying.asp)

7 **Recommended Minimum Periods of Exclusion**

---

This is a controlled document. Hardcopies of this document are considered uncontrolled. Please refer to the BMS Intranet for the latest version.
Children who are unwell should not attend the service.
The definition of ‘contacts’ will vary according to disease. Please refer to specific Fact Sheets in the Staying Healthy Publication for the definition of ‘Contacts’.

Campylobacter
Exclude until there has not been a loose bowel motion for 24 hours.
Exclusion of Contacts - Not excluded.

Candidiasis (‘Thrush’)
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

Chickenpox (Varicella)
Exclude until all blisters have dried. This is usually at least 5 days after the rash first appeared in unimmunised children and less in immunised children.
Exclusion of contacts - Any child with an immune deficiency (for example, leukaemia) or receiving chemotherapy should be excluded for their own protection. Otherwise not excluded.

CMV (Cytomegalovirus infection)
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

Conjunctivitis
Exclude until discharge from the eyes has stopped unless a doctor has diagnosed non-infectious Conjunctivitis.
Exclusion of Contacts - Not excluded.

Cryptosporidium
Exclude until there has not been a loose bowel motion for 24 hours. b
Exclusion of Contacts – Not excluded.

Diarrhoea (No organism identified)
Exclude until there has not been a loose bowel motion for 24 hours. b
Exclusion of Contacts - Not excluded.

Fungal infections of the skin or nails (e.g. ringworm, tinea)
Exclude until the day after starting appropriate anti-fungal treatment.
Exclusion of Contacts - Not excluded.

German measles (See ‘Rubella’)

Giardiasis
Exclude until there has not been a loose bowel motion for 24 hours. b
Exclusion of Contacts - Not excluded.

Glandular fever (Mononucleosis, EBV infection)
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

Hand, foot and mouth disease
Exclude until all blisters have dried.
Exclusion of Contacts - Not excluded.

Haemophilus influenzae type b (Hib)
Exclude until the person has received appropriate antibiotic treatment for at least 4 days.
Exclusion of Contacts - Not excluded.

Head lice (Pediculosis)
Exclusion is NOT necessary if effective treatment begins before the next day at the Service. (The child doesn’t need to be sent home immediately if head lice are detected).

Exclusion of Contacts - Not excluded.

**Hepatitis A**
Exclude until a medical certificate of recovery is received and until at least 7 days after the onset of jaundice.
Exclusion of Contacts - Not excluded. Contact a public health unit for specialist advice about treating or vaccinating children in the same room or group.

**Hepatitis B**
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

**Hepatitis C**
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

**Herpes simplex (cold sores, fever blisters)**
Exclusion is not necessary if the person is developmentally capable of maintaining hygiene practices to minimise the risk of transmission.
If the person is unable to comply with these practices they should be excluded until the sores are dry. Sores should be covered by a dressing where possible.
Exclusion of Contacts - Not excluded.

**Human Immunodeficiency Virus (HIV/AIDS)**
Exclusion is NOT necessary. If the person is severely immunocompromised, they will be vulnerable to other people’s illnesses.
Exclusion of Contacts - Not excluded.

**Human Parvovirus B19 (fifth disease, erythema infectiosum, slapped cheek syndrome)**
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

**Hydatid disease**
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

**Impetigo (school sores)**
Exclude until appropriate antibiotic treatment has commenced. Any sores on exposed skin should be covered with a watertight dressing.
Exclusion of Contacts - Not excluded.

**Influenza and influenza-like illnesses**
Exclude until well.
Exclusion of Contacts - Not excluded.

**Listeriosos**
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

**Measles**
Exclude for 4 days after the onset of the rash.
Exclusion of Contacts - Immunised and immune contacts are not excluded. For non-immunised contacts, contact a public health unit for specialist advice. All immunocompromised children should be excluded until 14 days after the first day of appearance of rash in the last case.

**Meningitis (viral)**
Exclude until well.
Exclusion of Contacts - Not excluded.
Meningococcal infection
Exclude until appropriate antibiotic treatment has been completed.
Exclusion of Contacts - Not excluded. Contact a public health unit for specialist advice about antibiotics and/or vaccination for people who were in the same room.

Molluscum contagiosum
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

Mumps
Exclude for 9 days or until swelling goes down (whichever is sooner).
Exclusion of Contacts - Not excluded.

Norovirus
Exclude until there has not been a loose bowel motion or vomiting for 48 hours.
Exclusion of Contacts - Not excluded.

Pertussis (See ‘Whooping Cough’)

Pneumococcal Disease
Exclude until person is well.
Exclusion of Contacts - Not excluded.

Roseola
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

Ross River virus
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

Rotavirus infection
Children are to be excluded from the service until there has not been a loose bowel motion or vomiting for 24 hours. 
Exclusion of Contacts - Not excluded.

Rubella (German measles)
Exclude until fully recovered or for at least four days after the onset of the rash.
Exclusion of Contacts - Not excluded.

Salmonellosis (Salmonella infection)
Exclude until there has not been a loose bowel motion for 24 hours. 
Exclusion of Contacts - Not excluded.

Scabies
Exclude until the day after appropriate treatment has commenced.
Exclusion of Contacts - Not excluded.

Shigellosis
Exclude until there has not been a loose bowel motion for 24 hours. 
Exclusion of Contacts - Not excluded.

Streptococcal sore throat (including scarlet fever)
Exclude until the person has received antibiotic treatment for at least 24 hours and feels well.
Exclusion of Contacts - Not excluded.

Toxoplasmosis
Exclusion is NOT necessary.
Exclusion of Contacts - Not excluded.

Tuberculosis (TB)
Exclude until medical certificate is produced from an appropriate health authority.
Exclusion of Contacts - Not excluded. Contact a public health unit for specialist advice about screening, antibiotics or TB clinics.

**Varicella See ‘Chickenpox’**

**Viral gastroenteritis (viral diarrhoea)**
Excluded until there has not been a loose bowel motion for 24 hours. b
Exclusion of Contacts - Not excluded.

**Whooping cough (pertussis)**
Exclude until 5 days after starting appropriate antibiotic treatment or for 21 days from the onset of coughing.
Exclusion of Contacts - Contact a public health unit for specialist advice about excluding non-vaccinated contacts, or antibiotics

**Worms**
Exclude if loose bowel motions are occurring. Exclusion is not necessary if treatment has occurred. Exclusion of Contacts - Not excluded.

b If the cause is unknown, possible exclusion for 48 hours until the cause is identified. However, educators and other staff who have a food handling role should always be excluded until there has not been a loose bowel motion for 48 hours.

Exclude if loose bowel motions present. Exclusion of Contacts - Not excluded.
